

Conglomerate mergers: Effects on growth and competition

Simon Blöthner ¹ Alessandro Kadner-Graziano ^{1, 2}

¹University of Bayreuth

²Charles River Associates

February 2, 2024

Motivation

- A conglomerate is a combination of business units operating in entirely different industries
- Usually they span multiple countries (multinational)
- There are more than 1000 conglomerates world wide
-
-

Model and setup

- Bullet Point 1
- Bullet Point 2

Results

- Explanation point 1
- Explanation point 2
- Explanation point 3

Questions to be addressed

- More dynamic splitting decisions depending on a change of ranks or market share
- Include jump processes
- Include pricing decisions by the firms to compute welfare statistics
- Check whether certain industrial configurations have different underlying processes (chemicals, electronics, consumer goods, etc.)
